

Department of Biology presents

“The odd link”

What is the relationship between the progesterone receptor (a protein involved in the preovulatory secretion of luteinizing hormone and ovulation) with hepatic steatosis (the accumulation of fat in liver cells) in people infected with human immunodeficiency and hepatitis C viruses? And how TNTs (tunneling nanotubes; cellular structures that participate in intercellular communication and spreading of pathogens) are connected with the latter fields of study?

Dr. Ana Gordon Bermúdez-Coronel
Department of Biology, Fresno State

Friday, September 23, 2016

3:00 PM

Science 2, Room 109
