

Department of Biology presents

“Genetically Engineered Crops (GMOs): Scourge or Salvation?”

ABSTRACT. The topic of genetically engineered crops (GE crops, sometimes referred to as “GMOs”) has become one of the most sensitive topics in our culture. While a single seminar can only “scratch the surface” of this complex issue, we can provide a foundation for further investigation and discussion. What are GE crops? Are they safe? Are there ecological concerns? Are there benefits to farmers? What about to consumers? This seminar will be a “30,000-foot flyover” of some of the diverse aspects of this important topic.
