[Administration CloudStack Survey](#)

For many years, Citrix has been a leader in giving universities the ability to put information technology into the hands of students, faculty and staff using virtualization, networking and collaboration. With the emergence of cloud technologies we have added another powerful set of solutions to transform the way IT is used in teaching, learning and administration.

Dave Getzler, Senior Account Manager for Citrix's Cloudstack solution, will be providing a short (10-15 minute) demonstration that provides an overview of the Cloudstack environment that Fresno State could use to make it easy for faculty and students to create the computing environments within the new Computational Science Center (CSC) that they need to pursue their research and studies.

**For further questions, please directly contact Dr. Cui Lin, from Computer Science Department. (email: [clin@csufresno.edu](mailto:clin@csufresno.edu))**
