

Software code migration project to vb.Net

I need someone to help me rewrite a VBA User Interface for a business applications program to vb.net in an asp.net platform.

Work in my office (Bullard/First area) part time/full time. Time estimate to be one to two months +/-.

Requires proficiency in vb.net and creating numerous aspx pages to perform as data input forms. A high degree of confidentiality and integrity will be required along with a signed Non Disclosure Agreement.

Please call to discuss project: Chuck Hoyt- 559 456-2478
