**Title:** Application Developer I

**Company:** SwarmBox

**Job Description**
A full time position for a developer who is well rounded in various programming languages. Will aid in the development of custom software solutions which utilize various Web, Database, and Handheld Scanning technologies.

Our back end applications are primarily developed in Java and/or Scala. Our front end applications are developed primarily using HTML5 and JavaScript (more specifically with the Ember framework). Knowledge of MySQL and/or PostgreSQL would also be looked upon favorably.

**Responsibilities**
• Full lifecycle application development
• Good grasp of object-oriented design and analysis
• Coding and debugging applications using JetBrains IntelliJ IDE
• Capable of fully documenting software functionality in code

**Compensation**
A salary of $50,000 to $70,000 will be determined based on the qualifications and experience of the applicant.

**About SwarmBox**
SwarmBox provides custom software and hardware solutions for companies that have specialized needs or simply aren't satisfied with existing mass marketed software solutions.
